

Linear Resolution

\square can be obtained from K in \mathcal{K} by *linear resolution* iff there are K_1, \dots, K_m with $K_1 = K$, $K_m = \square$, and for all $2 \leq i \leq m$: K_i is resolvent of K_{i-1} and a clause from $\{K_1, \dots, K_{i-1}\} \cup \mathcal{K}$.

Input Resolution

\square can be obtained from K in \mathcal{K} by *input resolution* iff there are K_1, \dots, K_m with $K_1 = K$, $K_m = \square$, and for all $2 \leq i \leq m$: K_i is resolvent of K_{i-1} and a clause from \mathcal{K} .
